

## basicDTM|Description

M&M provides the service to generate DTMs from PROFIBUS, HART or Foundation Fieldbus EDDs. *basicDTM* includes the complete generation of a DTM and a setup for installation. Besides the binary version, the source code version of the *basicDTM* is also available. This enables the user to enhance the generated *basicDTM* with individual functionality. *basicDTM* is a fast, efficient and affordable way of creating a DTM.

## M&M|About Us

M&M is the competent service provider for all matters concerning software products in the industrial automation. Our service portfolio includes Management & Technology Consulting, Software Development, Quality Assurance, IT Operations & Services and Software Maintenance & Support. We mainly focus on solutions for Human Machine Interfaces (HMI), device integration, engineering systems and web applications

## → *basicDTM*|Features

- Automatic generation out of PROFIBUS, HART or FF EDD files
- Prevention of programming errors with the automatic transfer of the DD
- Based on the tried and proven DTM-Toolkit *dtmMANAGER*
- User interface according to the FDT style guide
- FDT certifiable
- Source code version available
- Support of offline-parameterization
- Branding included
- Extendable with advanced user interfaces

## → *basicDTM*|Advantages

- Very fast and cost efficient way to get a DTM
- Higher DTM quality as compared to manual implementations
- Generated C++ source code is easy to comprehend and contains helpful comments
- The source code version is a perfect starting point for own DTM developments – much more efficient than starting from scratch
- One time license fee, no runtime licenses necessary

basicDTM
